Nonfunctional requirements		
ID	Name	Acceptance criteria
7	Technology used	The system will be a Java-written web application using the PostgreSQL database.
8	Security	Each user, unless he is an Administrator, will be able to only manage his own assets, all passwords will be stored in an encrypted form. Assets are especially the reservation and account details.
9	Reliability	The system will be properly tested before being delivered and deployed. Namely the core functions of creating and deleting reservations.
